

# SmartLam

## Peel & Reveal Multilayer Unit

### Stand out from the competition with a Multilayer solution

**Multilayer labels consist of two or three label layers.** These multi-layered labels give the freedom to product suppliers to include more than just the basic information. This can include more detailed product specifications, guidelines or instructions, pictures, or even promotional information.

#### They are often used for:

- special promotions
- to display a lot of information
- multiple languages

Multi-layer labels are often used for pharmaceutical and medical label applications – especially when government regulations require product information to remain intact with the product.

With a multi-layer label, you can also add recipes on food labels, promote sweepstakes / giveaways, offer detailed instructions, give multilingual information, debut a new product, attract buyers with coupons and display legal text.

**SmartLam is compatible with all modular finishers.** Efficient production of multi-layer units requires either cross-over units or lamination of two layers in register. Lamination in register has a major advantage over cross-over units, as the full web width is utilized. This doubles the production capacity and allows for full flexibility in the label design and size.

Advanced full servo control ensures a perfect register between the top and bottom layer. The system automatically controls web tension and register, while providing feedback to the user on the built-in touchscreen.

The system has an optional cloud/network connectivity and can be connected to a local or external network job base for fully digital job scheduling. Remote system diagnostics and monitoring come as standard.

#### SPECIFICATIONS

#### METRIC

Specifications	330 and 500mm standard
Web width	Up to 72 m/min
Speed	30 - 60 M PP ON SILICONE LINER
Verified Substrates	3x400V+N+PE, 6A, 6 bar
Power / Air	3x400V+N+PE, 6A, 6 bar
Dimensions (WxHxD)	200 x 280 x 900 mm
Weight	60 KG
